Overview

Google Analytics for Confluence is a dynamic web traffic analytics reporting plugin for Confluence.

- Plug and play integration application.
- Top Content macro shows most viewed content in a space (via Google Analytics)
- Site-level analytics reports
- Space-level analytics reports
- All reports can be run publicly or privately in Confluence.
- Page caching - page load time is very snappy
- Who's viewed this page? – on page report listing users who have viewed the current page
- User tracking is performed via a private unique user ID to comply with [section 7 of the Google Analytics Terms of Service](#).
- View analytics reports for both Confluence *and* multiple external sites, all in Confluence

Live Demo

See [this live demo site](#) - hosted on AppFusions website, tracking statistics of [read-able.com](#) website, and displayed in Confluence.

Video

Displays reports for an external Confluence website, or a particular space (from within that space).

Who's viewed this page?

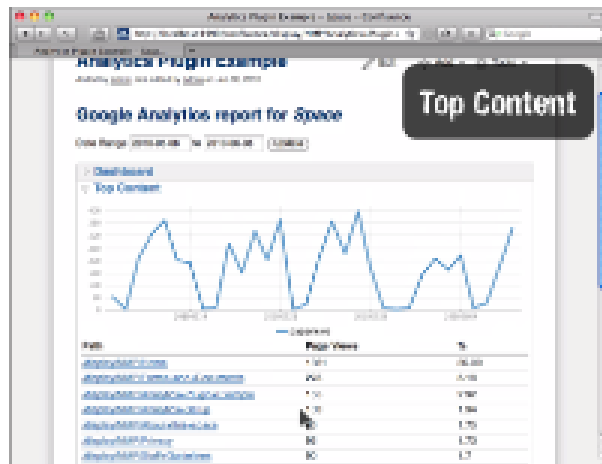

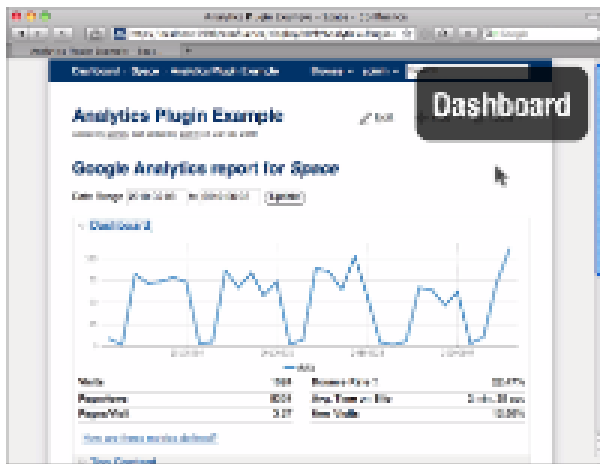

On-page analytics showing users who have viewed the current page:

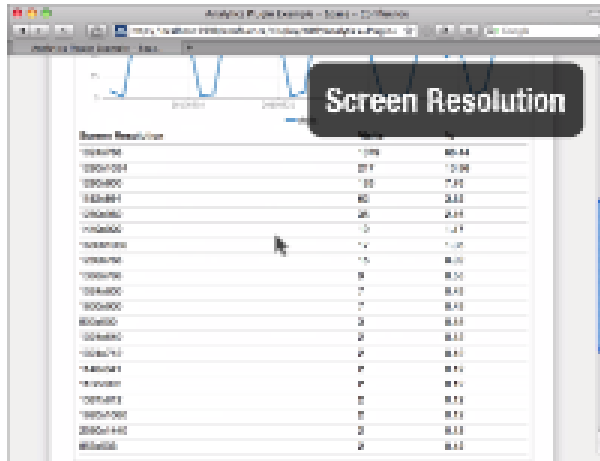

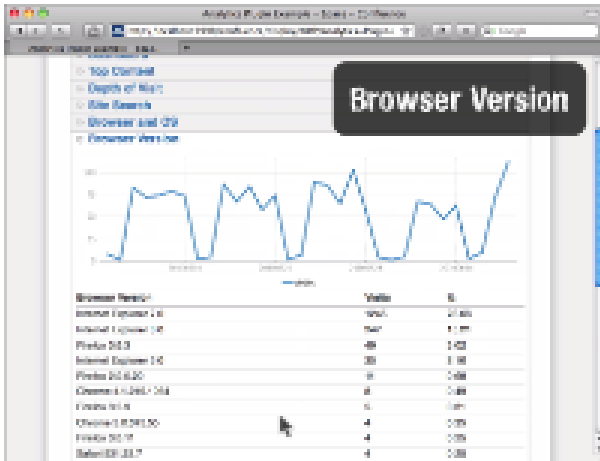

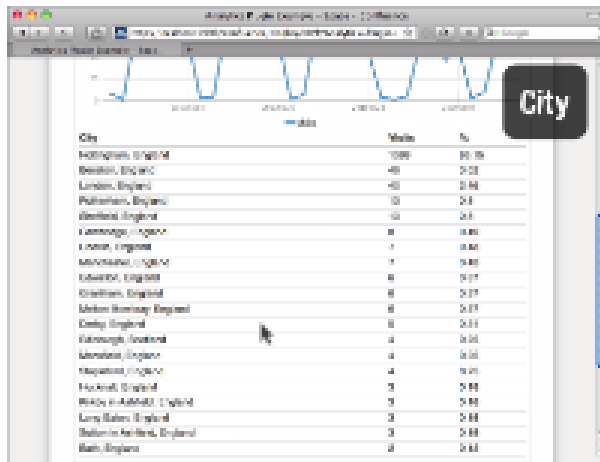

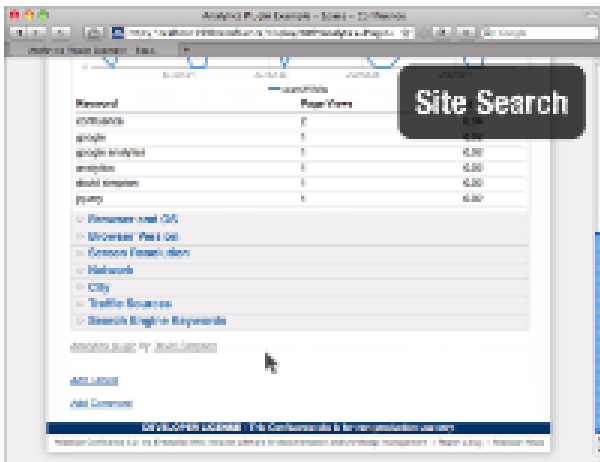

The screenshot shows a Confluence page titled "Documentation - Version 2.x" with a modal window open over it. The modal, titled "Who's viewed this page?", displays a table of viewers for the last month. The background page content includes a table of permissions and a sidebar menu.

User	Pageviews	Unique Pageviews
Danielle Zhu	5	3
Dora Chun-Christman	5	4
David Simpson	15	5

Name	View All Permission	View None Permission	Exceptions	Explanation
Open access/Not configured	none	none	none	By default, the confluence-users group (of which all users are members) will have the View By Membership permission, so all users will be able to see each other.
Hide user information	none	confluence-users	none	All users cannot view any user information
Partners Portal	my-company-	partner-x-users,	confluence-users	my-company-users members will be able to view all user information. partner-y-users, partner-z-users members cannot view any user information.
